Catalogue information and Sire information

Kaya Dorper & White Dorper continues to use a strict selection criteria based on the South African breed standards and animals are inspected by registered inspectors to maintain quality.

We are also the major Dorper & White Dorper contributor to the Lambplan database.

In 2009, 38% of the individual animals submitted were from Kaya.

Breeding aims

Kaya continues to select sheep based on the following criteria:

- a) **shedding ability** - we believe that the only reason you would want a Dorper or White Dorper is its ability to lose its fleece and therefore limit handling.
- b) **Conformation** - it is a great importance to have a sheep with good feet and shoulders with the ability to walk and survive to an old age.
- c) **fertility** - to compensate for no wool income we need more lambs
- d) **ability to survive** - we consider that a large market for the Dorper & White Dorper is the ability to produce lamb on dry pasture without feedlotting. To do this we need to retain "fat" and retain the ability to graze
- d) **carcase traits** - we continue to use extensive recording to improve or maintain the excellent carcase traits of the Dorper and White Dorper

Australian Dorper Society Information

All the animals in our sale are eligible to be registered with the Aust Dorper Society.

If you would like your purchase registered and transferred to your name then please fill out the trucking instructions correctly and "tick" the "**Breed Society Transfer required**"
